

- I just received this 9/19/14

Environ, the District's Environmental Consultants, will be doing additional soil testing in the Cornucopia Area at Malibu High School. Previous testing this past Summer discovered elevated levels of Arsenic in four areas of interest in Cornucopia. Environ working with the CA Department of Toxic Substances Control has developed a plan to do additional testing of the soil.

The entire Cornucopia area has been closed to student activities since Environ began their testing several months ago. For this current testing, surveying will begin on Saturday, Sept. 20 and conclude by Tuesday, Sept. 23. Sampling will occur between Wednesday, Sept. 24 and Friday Sept. 26. Sampling will occur in the walkway between the Student Parking Lot and Floris Heights on Thursday, Sept. 25. This day is a District Holiday and there is no school. There will be no access to this walkway on that Thursday, Sept. 25.

For more information, please contact Carey Upton, Director of Facility Use, 310-395-3204 x71586.
